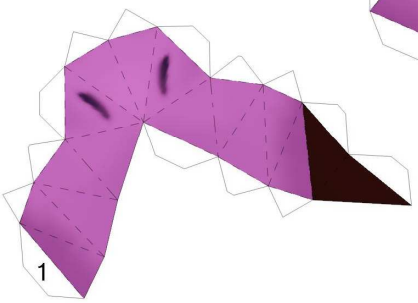
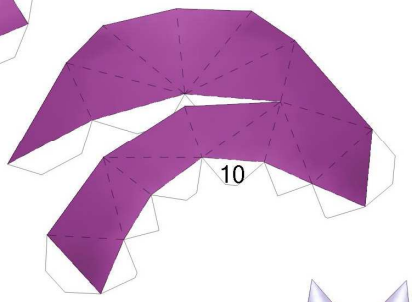
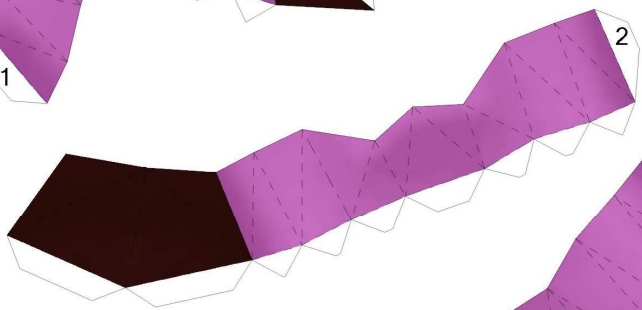
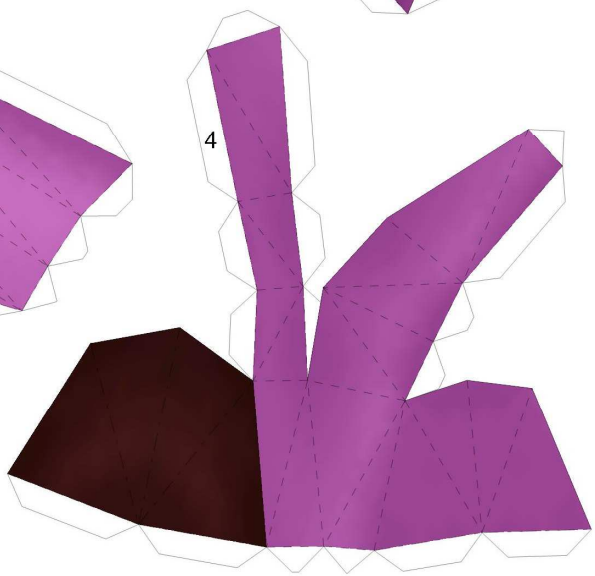
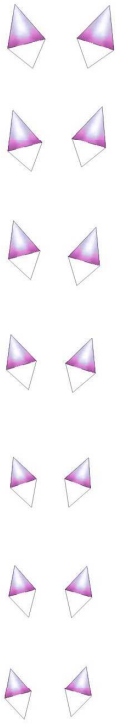
Start at the mouth and build following the numbers around it. Fold the indicated lines. Glue the teeth to the mouth BEFORE joining it to the head.

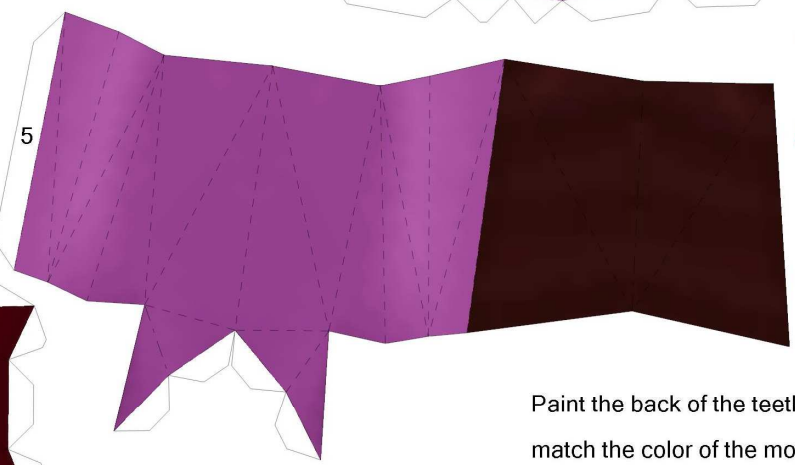


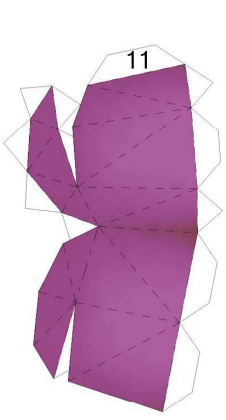


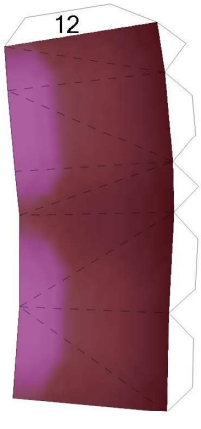




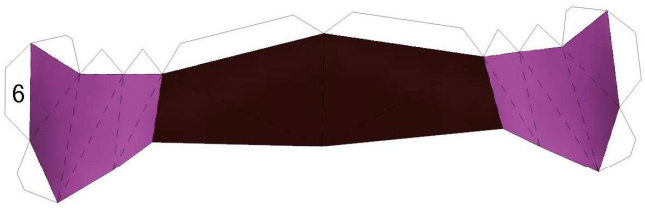


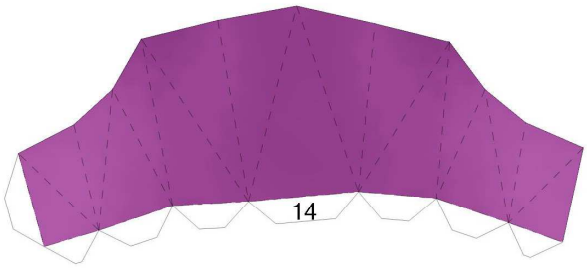


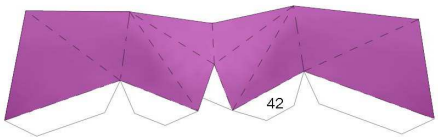


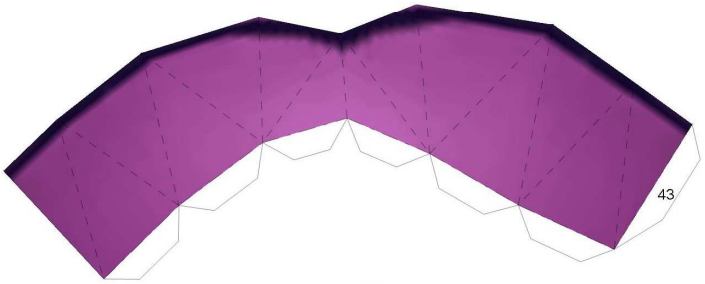


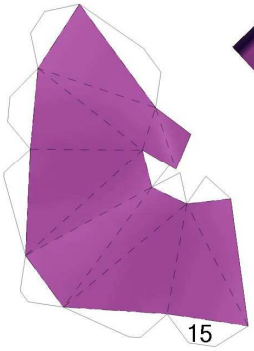
Paint the back of the teeth tabs to match the color of the mouth.

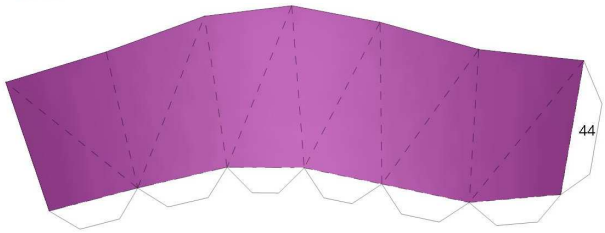


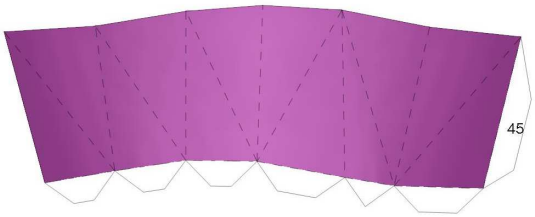


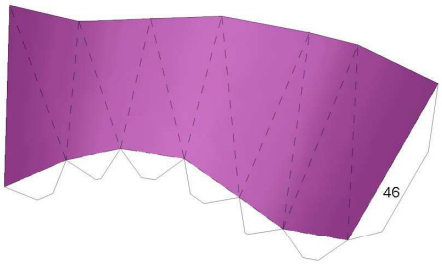


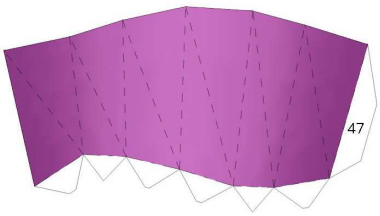


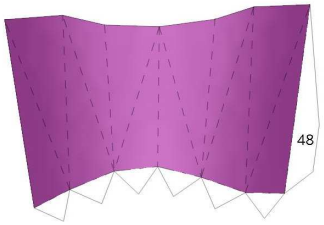






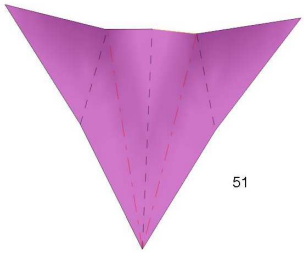


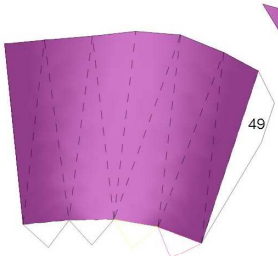


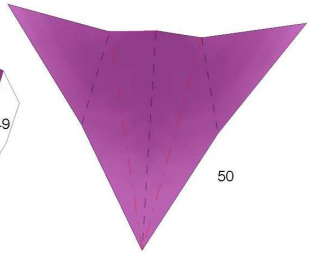


Close the model at the tip of the tail. Fold the indicated lines and glue the sides together.

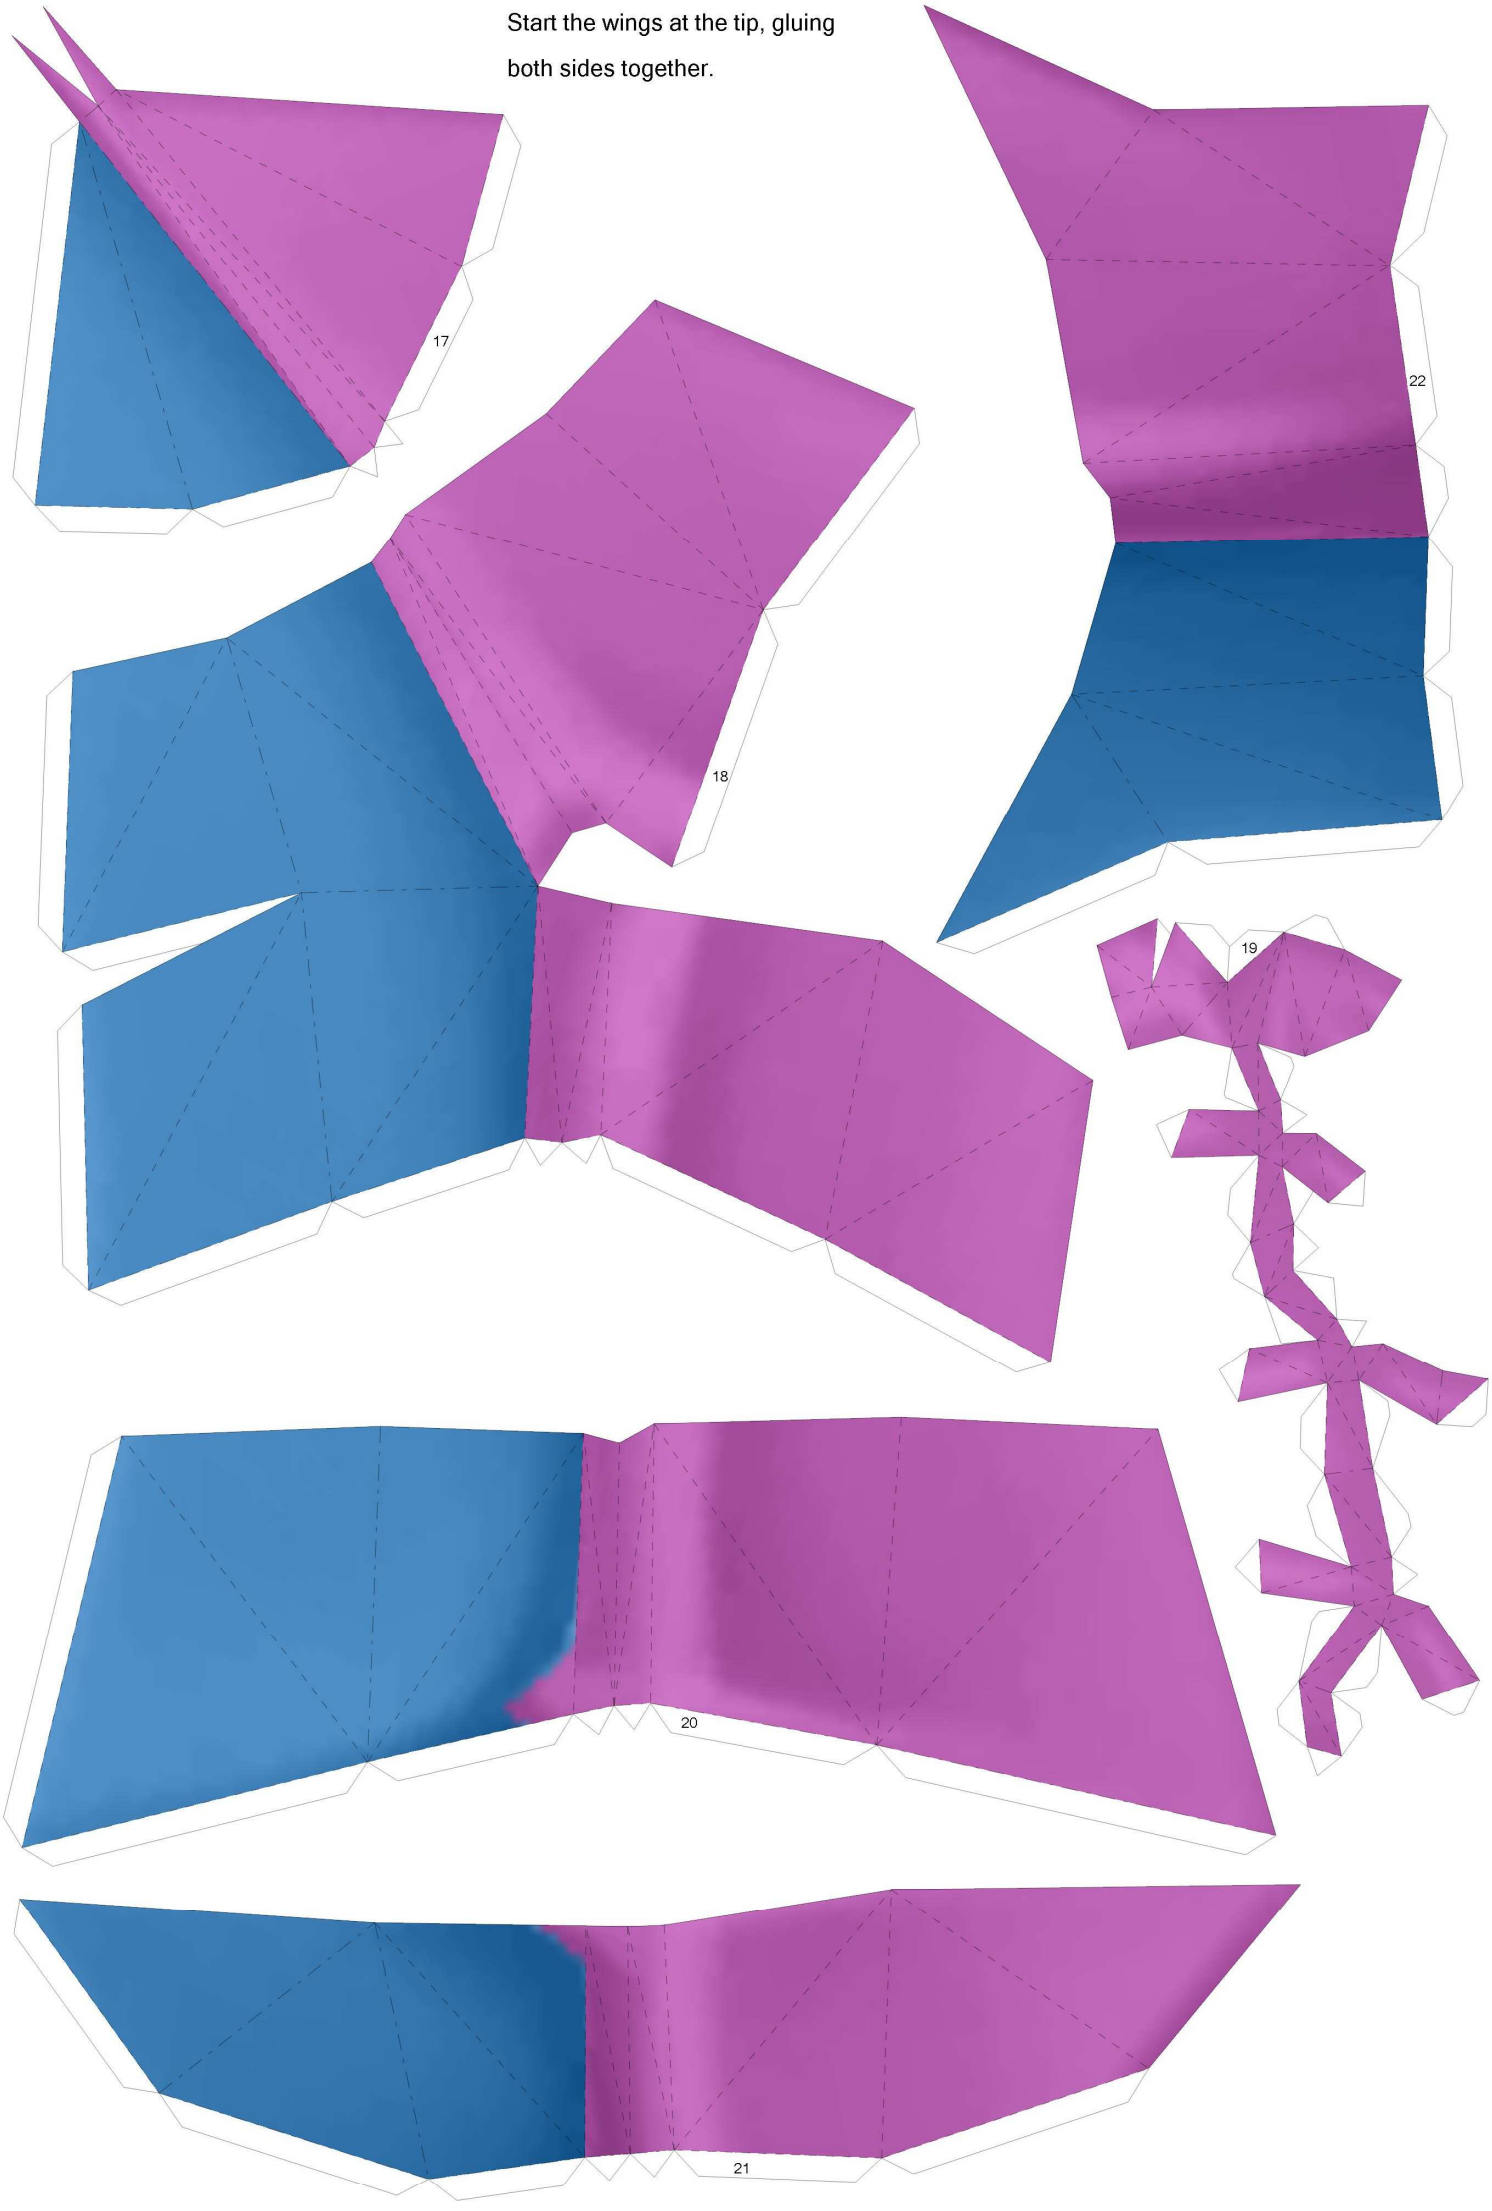
You MUST reinforce the inside where the wings connect to the body. Glue some layers of scrap paper there after piece 30 is glued.

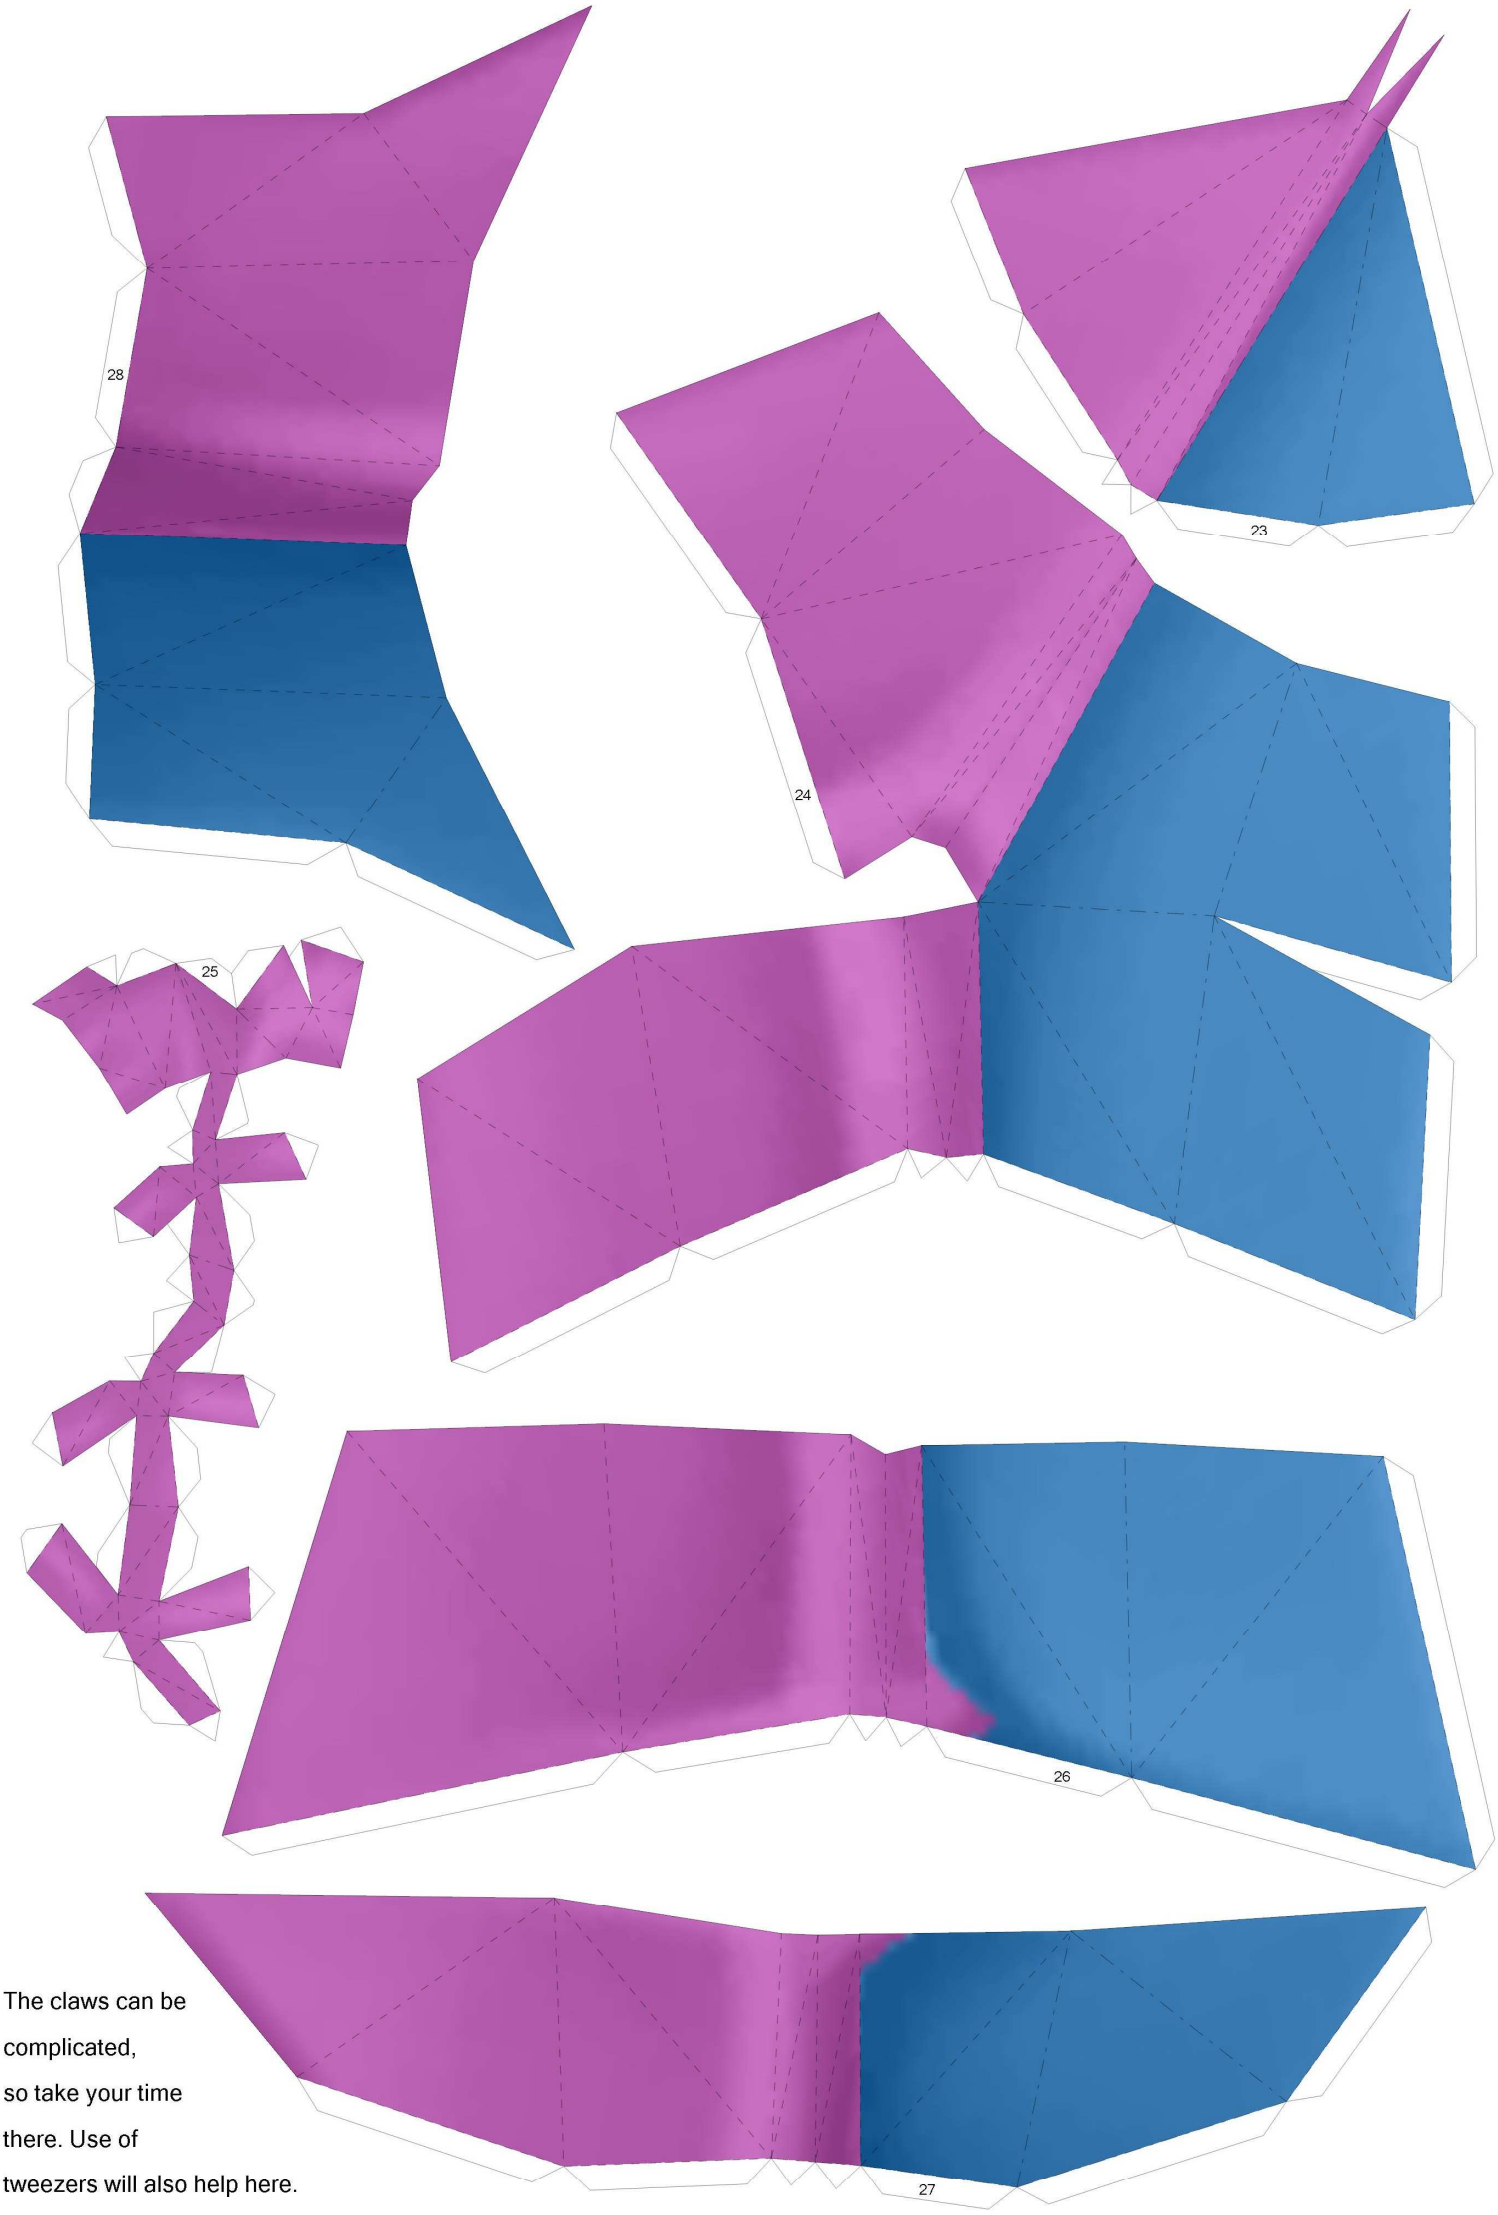




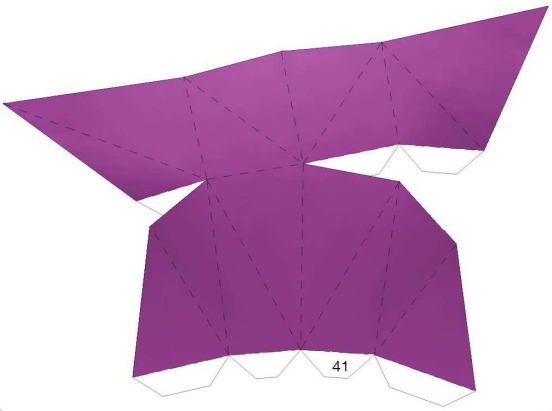


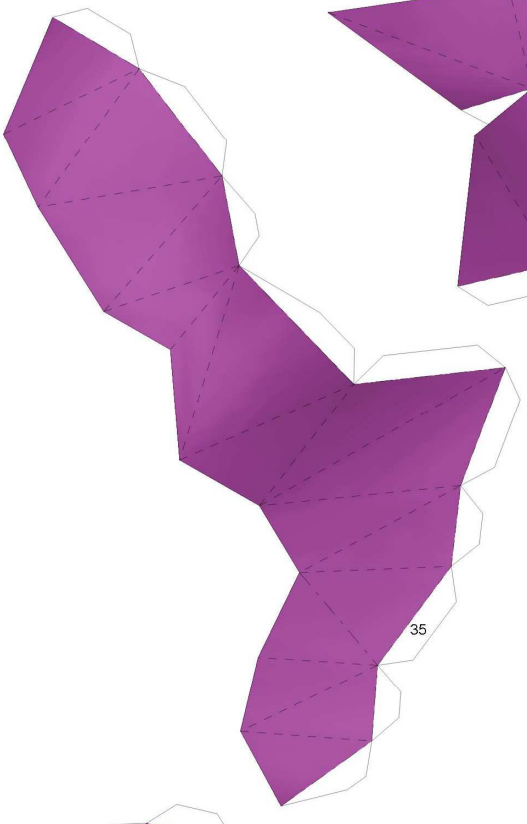
Start the wings at the tip, gluing both sides together.

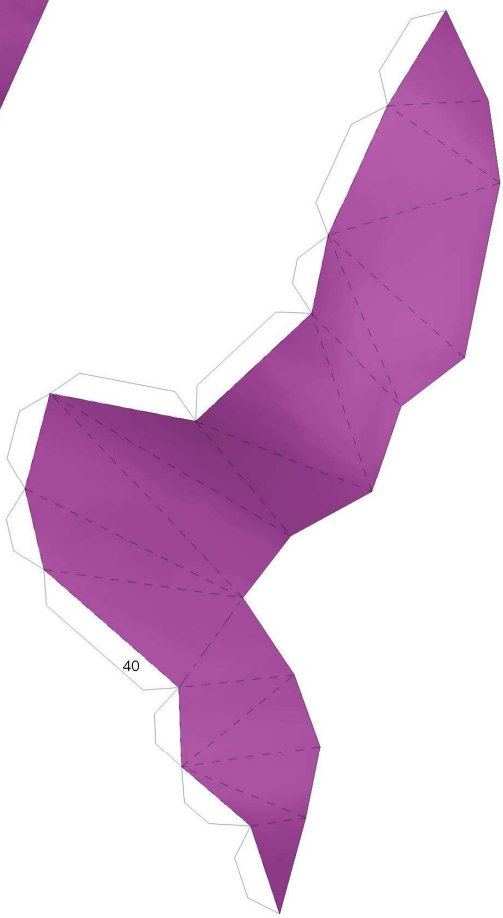


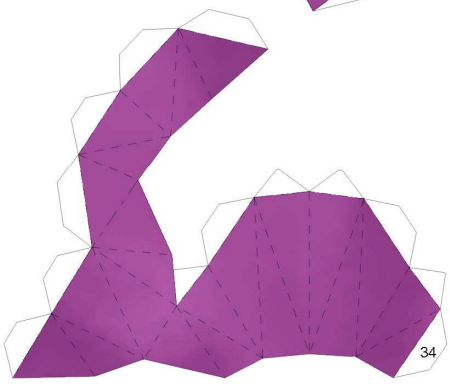


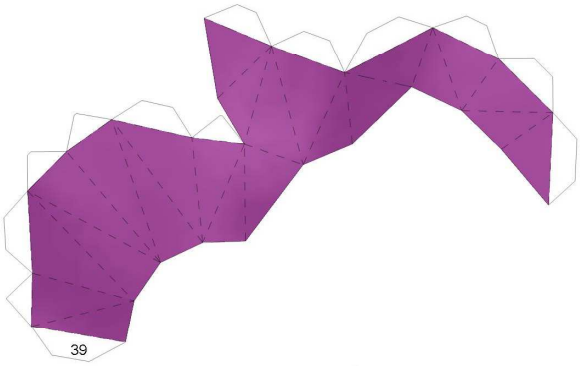
The claws can be complicated, so take your time there. Use of tweezers will also help here.

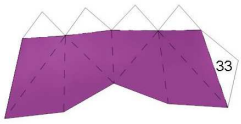


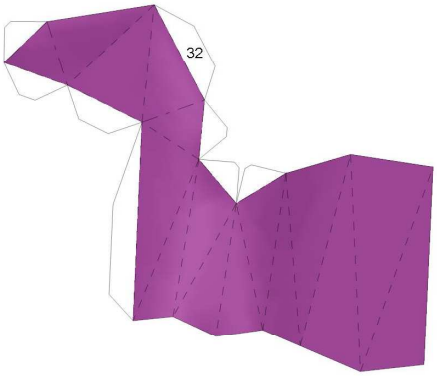


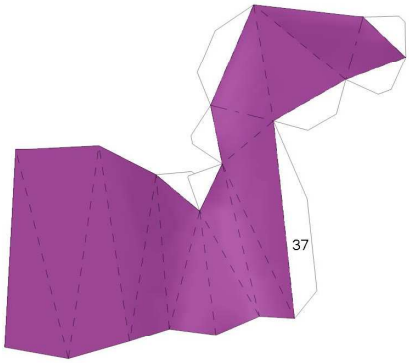


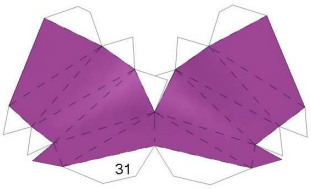


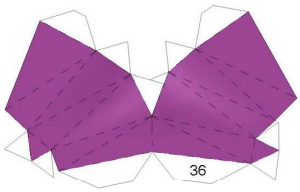












Start the legs by the toes and build up. Glue them to the body BEFORE going to the tail.
