Larvitar V2
By Brandon
Build by LuIS

Start at the horn working down.
Build it by numbers, adding the
arms, legs and the tail when the
numbers get to them.
Close at the feet.
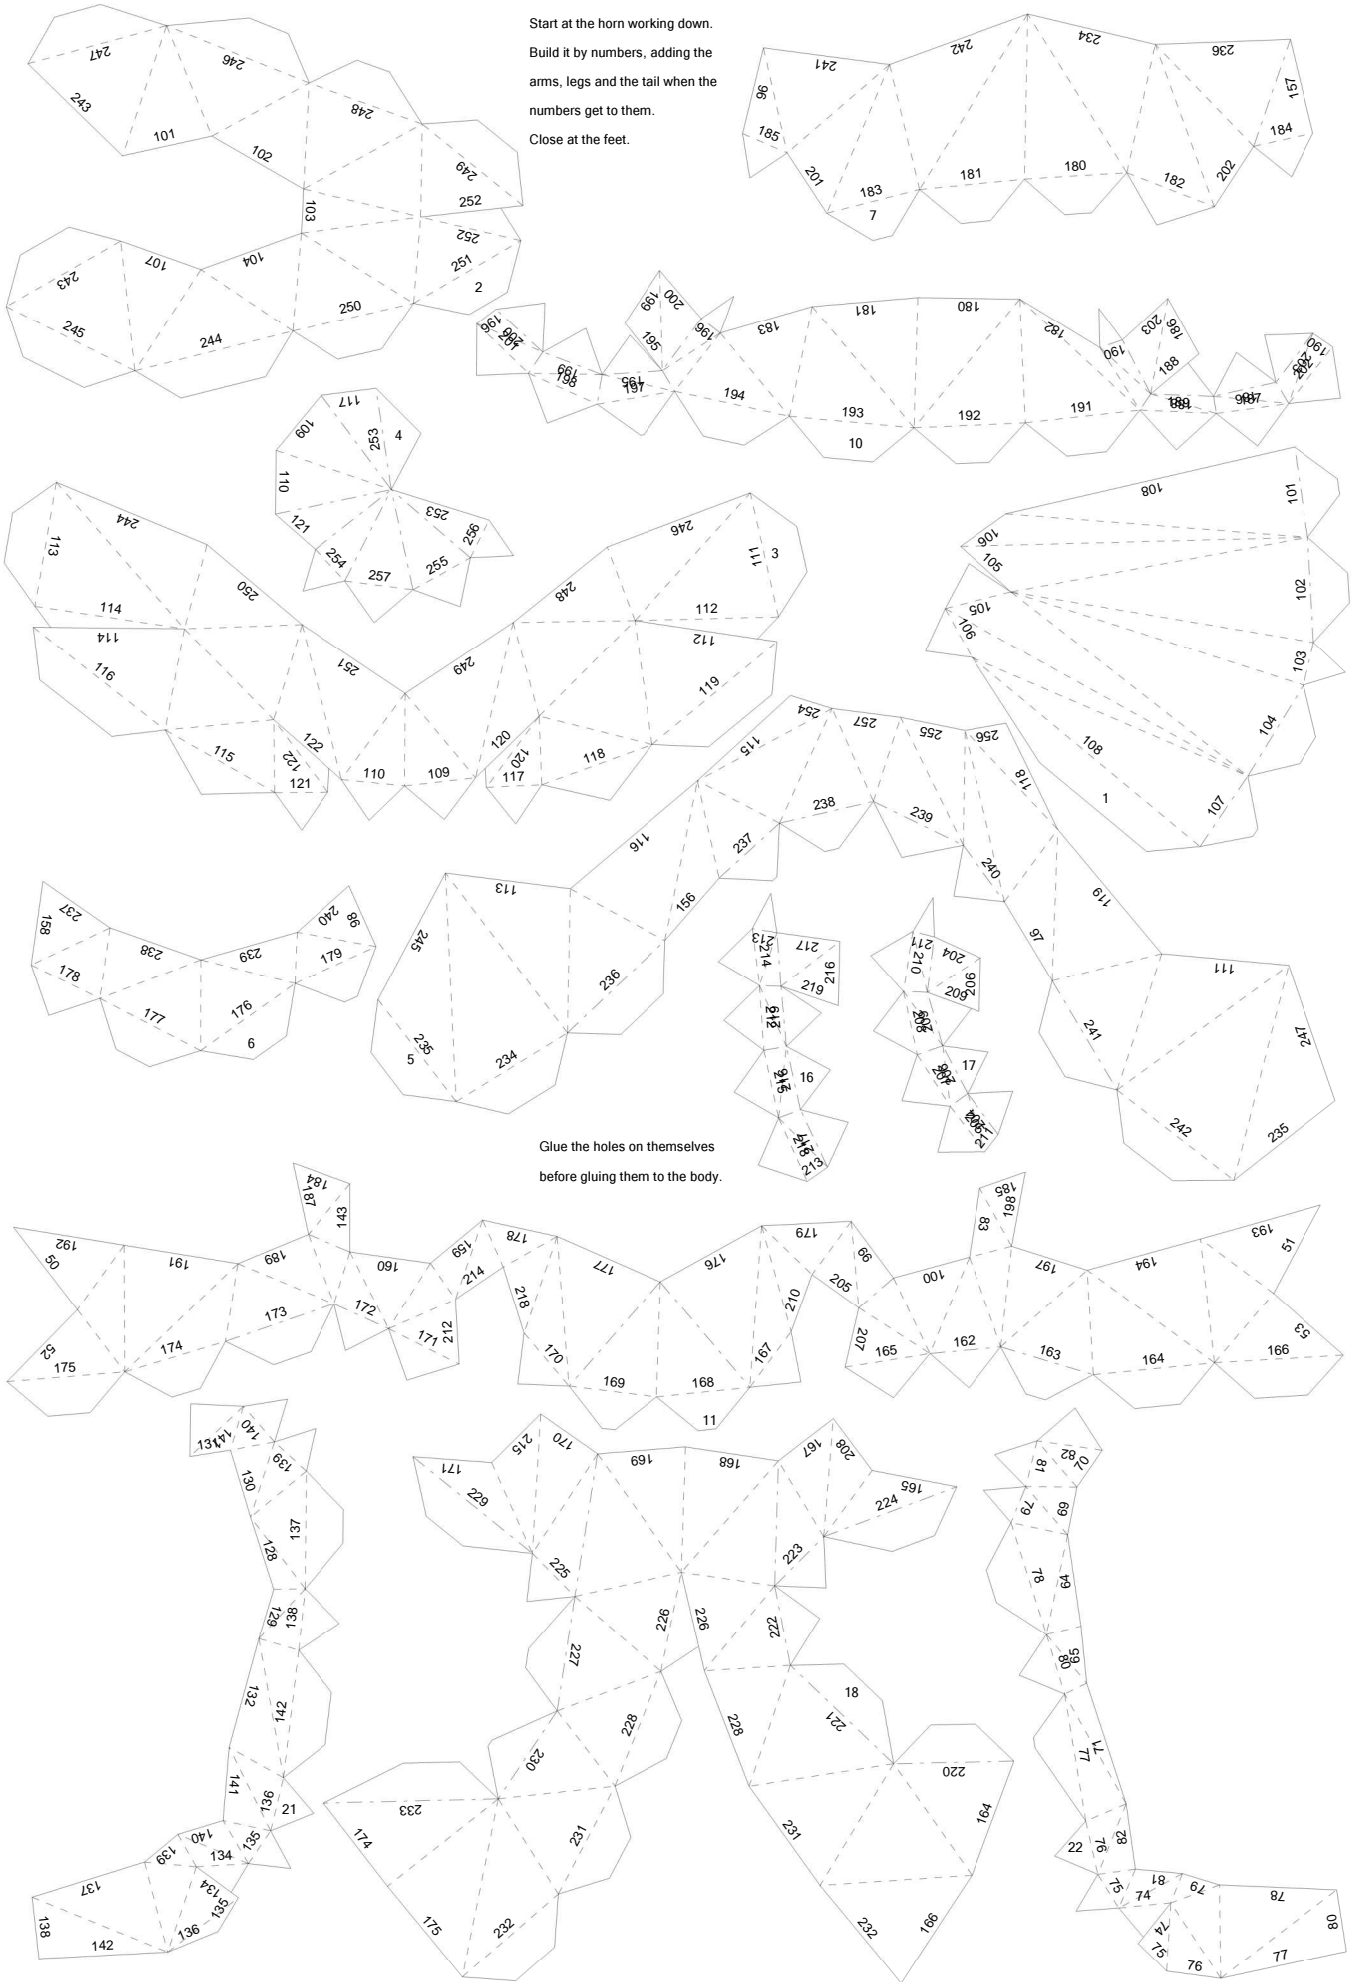

Glue the holes on themselves
before gluing them to the body.

Start gluing the legs
from the top down.
Add the feet right after.

Start the tail by the "spike" and glue piece
14 on it, but only after it's completelly glued
on itself. Be carefull while you cut piece 14,
it can easy rip. Glue piece 15 after 14 is attached
and glue the tail to the body.
