

Hero of Twilight instruction manual

step 1

The bare essentials for papercrafting are a knife and glue (and the parts, preferably printed on thicker paper) but any other tools like a toothpick and a small metal rod will help you reach places where your fingers can't... (and a cutting mat will protect your desktop so you won't ruin it ;o)

step 2

Parts that seem difficult at first, can be easy if you pre-shape the part first, and assemble them in a particular order. For part 1 for example, I find it easiest to first glue one of the sides around the sole of the boot...

step 3

...then the other side...

step 4

...and last but not least, the "bridge" from one side to the other.

step 5

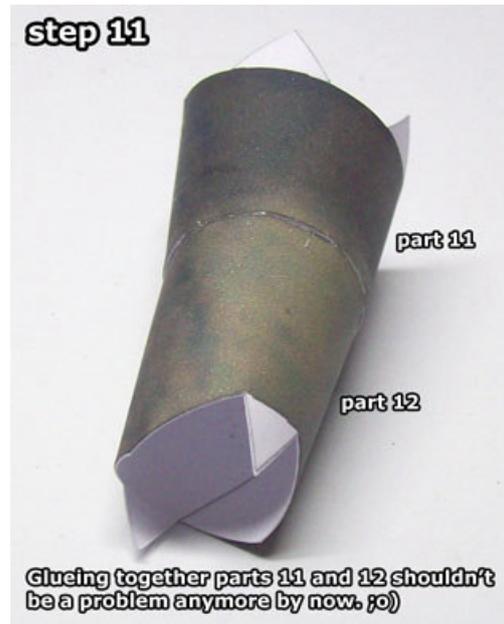

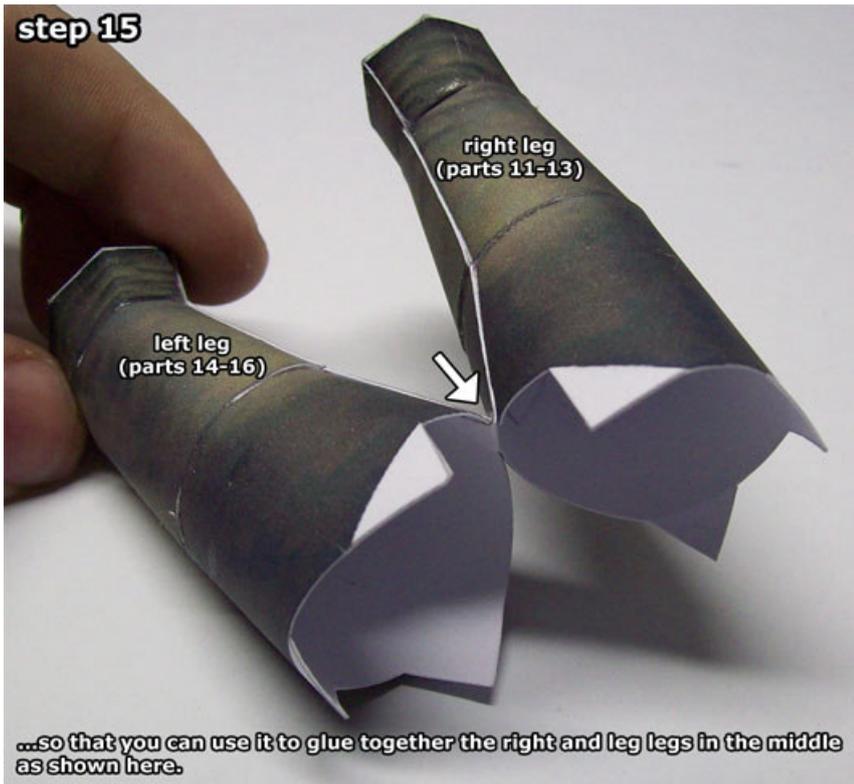

Cut out and pre-shape part 2, and then glue it to part 1 to close the hole on the front of the boot.

step 6

Glue the two ends of part 3 together to create a cylinder-like shape, and then glue it to the boot as shown here.

step 18

...leaving open the back for now...

step 19

...only closing the back after you glued the front and sides together properly.

step 20

Now you can glue the boots to the legs (don't mix up left and right: the right boot is the one with the Ninjatoes logo ;o)

The seams on the backside should line up, but the important thing is to glue on the boots so the soles rest flat on the ground, so that he won't fall over.

step 21

Now assemble and glue together parts 18 and 19...

step 22

And then simply place the chainmail skirt over the legs, glueing the glueing tabs of part 18 on top of those on part 17.

step 23

Pre-shape and glue together parts 20-22 as shown here.

step 24

After assembling part 23, glue it on as well.

step 25

Glue the bottom part of the tunic over the chainmail skirt, glueing the backside of the belt to the glueing tabs.

step 26

Glue the ends of part 24 together to make the bottom part of the torso, and then glue on part 25 to the front and part 26 to the back.

step 27

To glue on part 27, I found it easiest to first glue the ends together at the back, then glue on the frontside first...

step 28

...and after that, the backside.

step 29

part 28

Now glue part 28 around the neckhole as shown here.

step 30

Now first glue together part 29 as shown here...

step 31

...and then glue it to the body like so. Take your time, and make good use of the holes on the top and bottom of the torso.

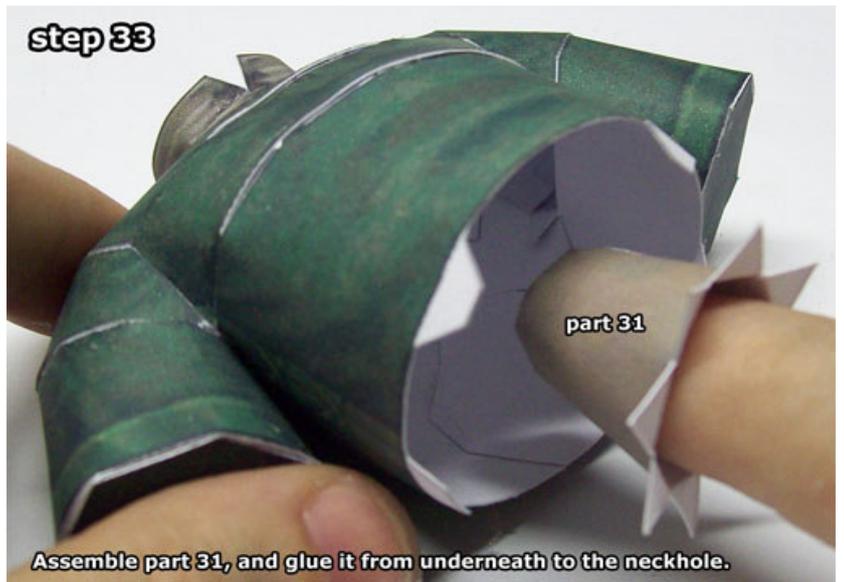

step 32

part 30

Assemble part 30 in the same way as part 29, and glue it to the other side of the torso.

step 33

part 31

Assemble part 31, and glue it from underneath to the neckhole.

step 34

Align the seam at the back of part 31 with the seam at the back of part 27.

step 35

part 32

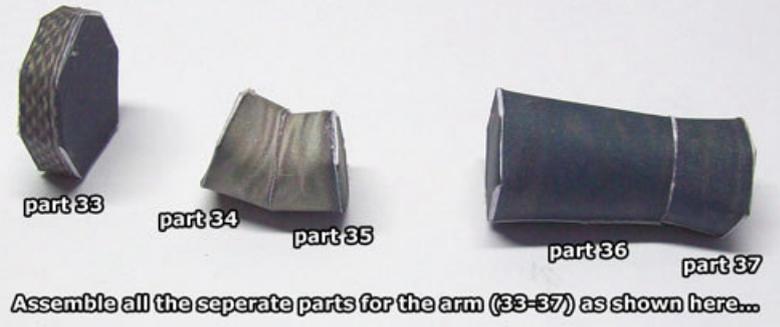

When glueing on part 32, leave open the bottom as long as possible...

step 36

...until you glue the torso to the legs like so.

step 37

part 33

part 34

part 35

part 36

part 37

Assemble all the sepearte parts for the arm (33-37) as shown here...

step 38

part 33

parts 34-35

parts 36-37

...and then glue them together like so.

step 39

part 33

part 39-40

part 41-42

Do the same for parts 38-42 on the other arm.

step 41

part 43

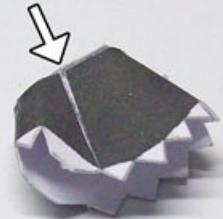

...so you can glue it to Link's left arm.

step 40

Fold double part 43, and curve it before the glue has dried...

step 42

Pre-shape and glue together part 33. The large glueing tab needs to be valley folded, so you can shape the base of the thumb.

step 43

part 34

part 35

The fingers are all made up from small cylinders. They're small, but not too difficult to assemble if you roll them around a toothpick first: www.youtube.com/watch?v=3ph7ayEs1RA

step 44

part 34

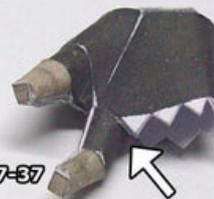

part 35

Glue them to the base of the thumb as shown here.

step 46

parts 37-37

...before glueing them to the hand like so. The easiest way to do this is to put a fair amount of glue in the open end of the finger, and then press them onto the glueing tabs. The extra glueing tab is used to glue on the next finger.

step 45

part 36

part 37

For the rest of the fingers, I found it easiest to glue the two parts for each finger together first...

step 47

parts 38-39

Just keep glueing on the fingers one...

step 48

parts 40-41

...by one...

step 49

parts 42-43

...by one.

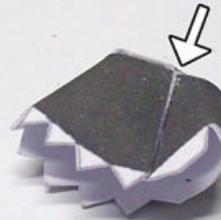

step 50

right hand
(parts 33-43)

Then glue the hand to Link's arm. The position of the thumb will tell you on which side (or you can just check the picture).

step 51

The left hand goes together the same way. First assemble part 44 (minding the valley fold again to shape the base of the thumb).

step 52

parts 45-46

Then glue on the thumb (parts 45-46)...

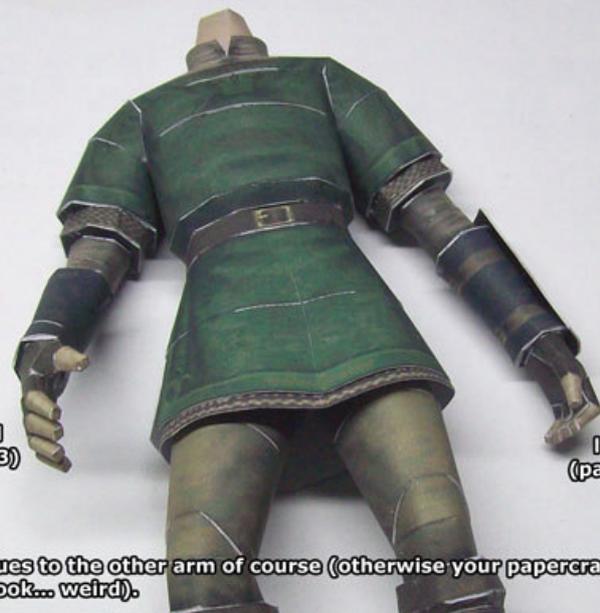

step 53

parts 47-48
parts 49-50
parts 51-52
parts 53-54

...and then all the other fingers.

step 54

right hand
(parts 33-43)

left hand
(parts 34-54)

This hand glues to the other arm of course (otherwise your papercraft model of Link would look... weird).

step 55

Now cut out and assemble part 55.

step 56

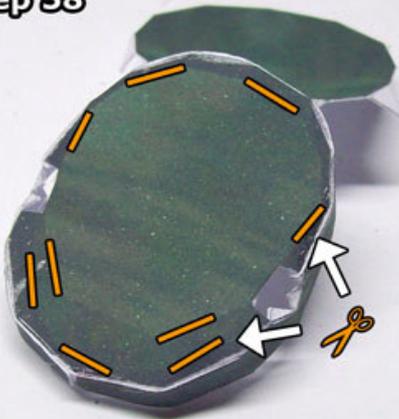

Glue on part 56...

step 57

...and then glue on parts 57 and 58.

step 58

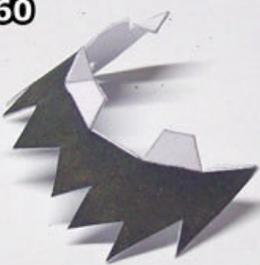

It is easiest to cut the slits on part 59 before you cut out and assemble the part.

step 59

The cap (parts 55-58) needs to be glued on top of part 59, so that part 59 sticks out a bit on the front and sides, but not at the back.

step 60

Pre-shape part 60, but take note that the grey coloured glueing tabs shouldn't be folded down...

step 61

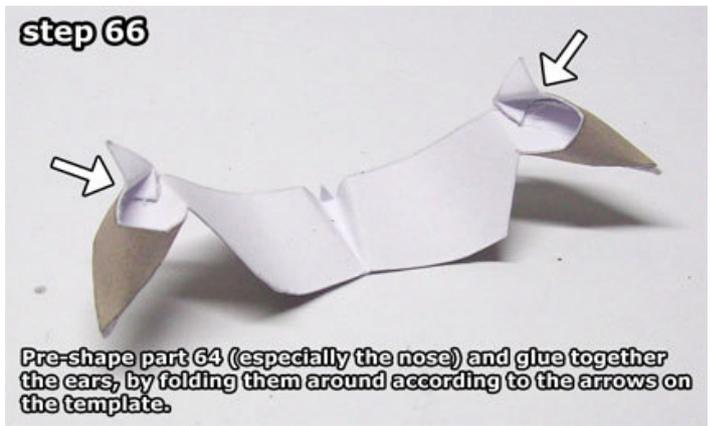

Because those need to be inserted into the slits on the bottom of part 59.

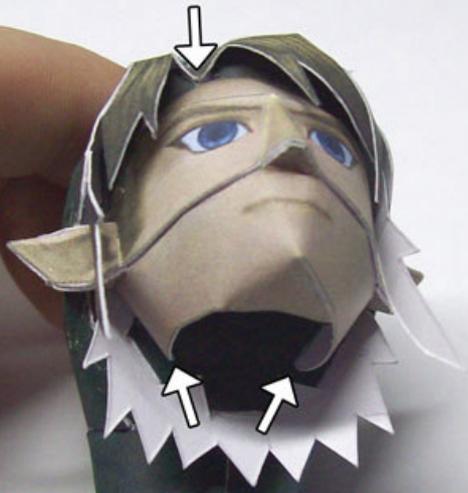

step 62

Now pre-shape and assemble part 61...

step 70

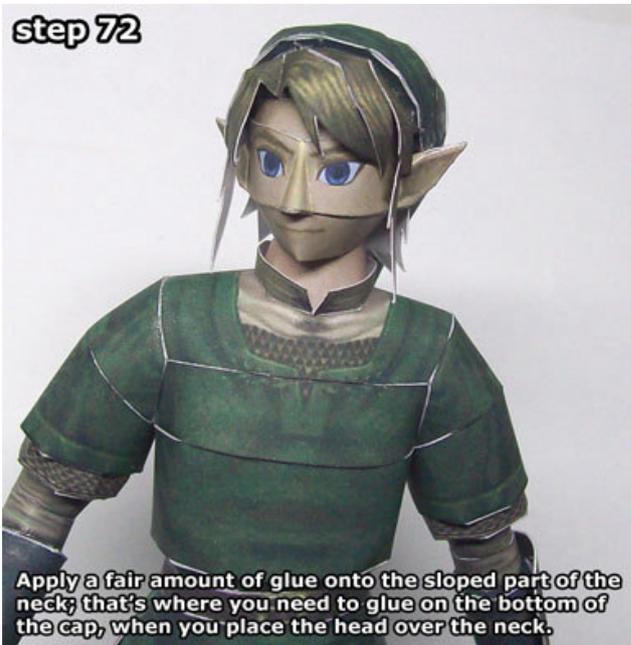

Glue the head to the cap using the two grey coloured glueing tabs at the back. The ears will fit into the notches on the sides, and the hair at the top of the head will fit underneath the hair on the cap. It doesn't need to be glued, except the part at the valley fold in the middle.

step 71

Make sure to apply some glue to the glueing tabs around the notches for the ears, and then gently press on the ears to glue them on tight.

step 72

Apply a fair amount of glue onto the sloped part of the neck; that's where you need to glue on the bottom of the cap, when you place the head over the neck.

step 73

Lead part 69 underneath Link's right arm first, and then glue together the two ends on top of his left shoulder, and after that, the two ends underneath his right arm.

step 75

...and 71 and glue them to Link's belt like so.

step 74

Now cut out and assemble parts 70...

step 76

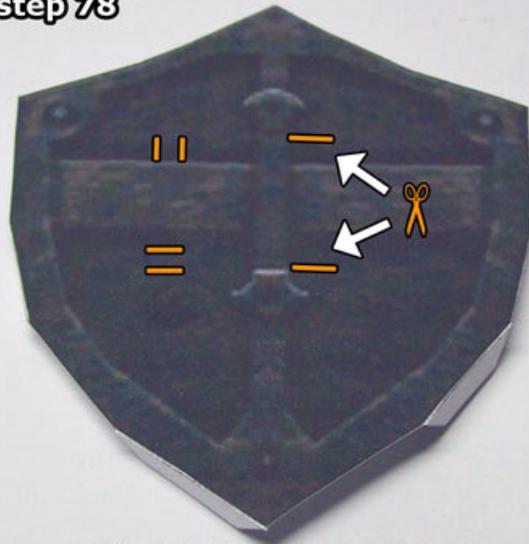

Cut out and glue together part 72.

step 77

Then glue on part 73.

step 78

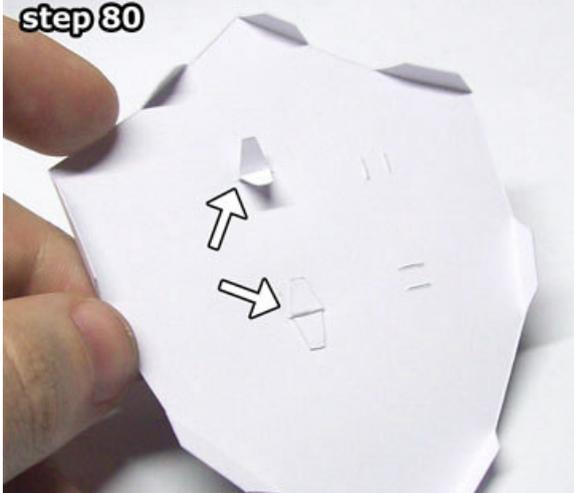

Now cut out part 74, including the little slits.

step 79

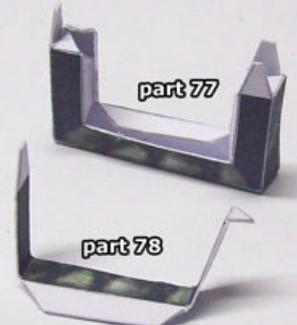

Glue together parts 75 and 76 back-to-back (except the glueing tabs!) and curve them before the glue has dried.

step 80

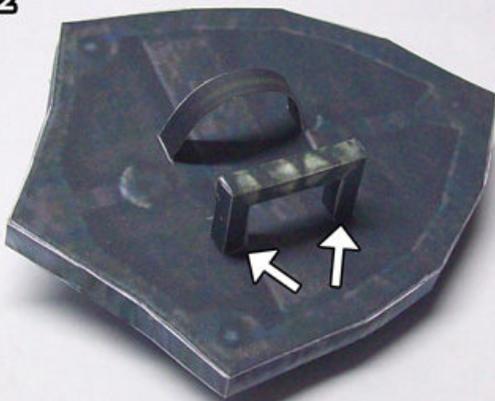

Push the glueing tabs through the slits on part 74 (you'll know which ones) and then glue them down as shown here.

step 81

Cut out and assemble part 77 and pre-shape part 78...

step 82

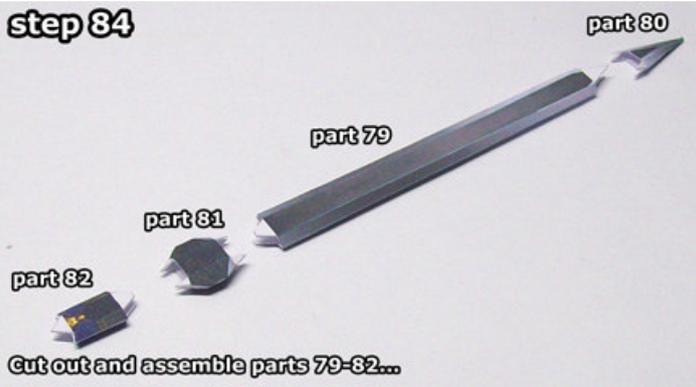

...glue them together and then glue the handle you made to part 74 using the tabs and slits like you did on parts 75 and 76. After that, glue part 74 to the front of the shield (part 72).

step 83

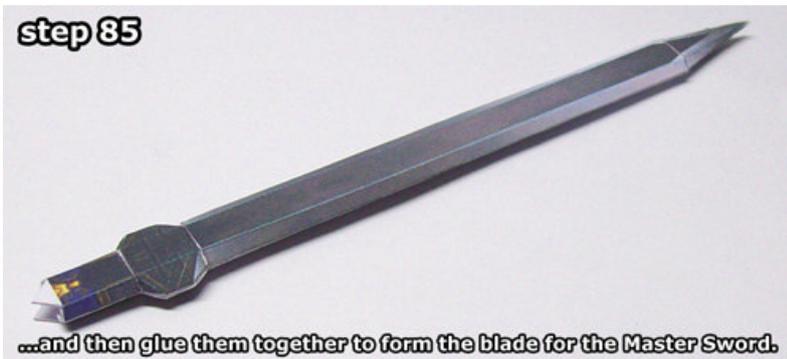

Now slide the brown strap over Link's right arm to place the handle in his hand as shown here (push the fingers together a bit if needed).

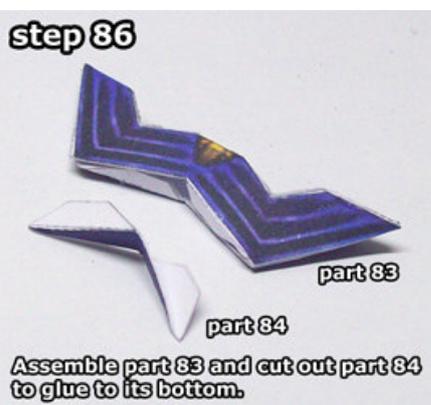

step 84

step 85

step 86

step 87

step 88

step 89

step 90

step 91

...and then place the Master Sword in Link's left hand.

step 92

Now cut out and glue together the final two parts...

step 93

...and then find a nice place for the assembled scabbard on Link's back as shown here.

step 94

And that's it, your Hero of Twilight is done!
